

ABSTRACT OF THE DISCLOSURE

A vehicle air conditioning system which includes: an air conditioning unit for generating air-conditioned air, which
5 is provided with a ventilation opening and a defroster opening;
a ventilation duct connected to the air conditioning unit at
the ventilation opening, which conducts the air-conditioned
air to a ventilation outlet; a defroster duct connected to
the air conditioning unit at the defroster opening, which
10 conducts the air-conditioned air to a defroster outlet; and
an additional duct branching off from the defroster duct, which
conducts the air-conditioned air from the defroster duct to
an additional outlet.
